Dear Dean,

You recently treated a patient whom I have also seen in consultation, Mr. Michael Anderson. He visited you recently from Los Altos, close to San Francisco, and I think received two treatments related to his multiple myeloma which has produced significant bone involvement and bone pain. He, and his wife, shared with me the techniques that you use and in fact, gave me a copy of your video plus book and some additional materials. I really appreciated these.

I am quite interested in the healing techniques which you use and have attempted to study this both in the laboratory as well as with patients. For example, in the laboratory, I have been studying energy transfer in normal and malignant tissues. I have been looking at unusual types of energy, for example, the types detected using Kirlian photographic techniques or similar detection methods. I am particularly interested in nonlinear patterns of energy transfer. Studying patient samples, I have also been interested in patterns of disease in individual patients and in the status of healing cross-related to a state of mind. I am interested in whether you might be interested and/or have the possibility of some research collaboration.

I realize that you are extremely busy but perhaps there could be time when we can meet and discuss areas of mutual interest. I look forward to hearing from you. With thanks in advance.

Yours sincerely,

Brian G.M. Durie, M.D.
Professor of Medicine
UCLA School of Medicine
Cedars-Sinai Medical Center
Director, Myeloma Research and Treatment Center
Division of Hematology/Oncology
